

ILINX SHAREPOINT CONNECTOR *for* UCM

Access Oracle UCM content from within Sharepoint.

ILINX SharePoint Connectors work with Microsoft Office SharePoint Server 2007 to provide a pervasive platform capable of seamlessly accessing content from within your Oracle UCM repository.

This easy-to-deploy Web Part maintains the valuable familiarity and features of UCM, from advanced search capabilities to security parameters.

CONNECTORS MAKE GOOD BUSINESS SENSE FOR:

- › Archive & Retrieval
- › Access to content that is both in- and post-process
- › Organizations desiring to provide access to information for all knowledge workers, not just application-specific users

OPERATING SPECIFICATIONS

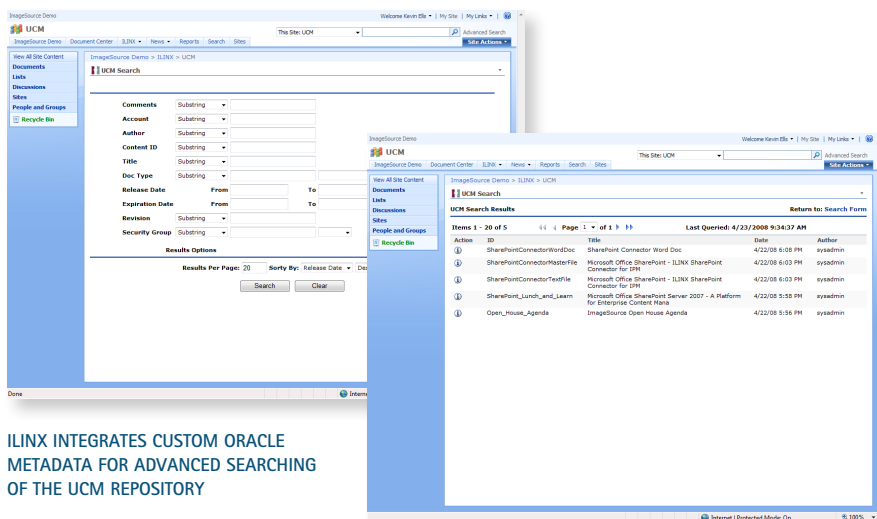

- › Oracle|Stellent UCM v7.6 SP2, 7.7 (10gr3)
- › Microsoft MOSS 2007

Business Benefits

- › Enables **Single Instance of Document**
 - › Provides infrastructure and integration necessary to re-purpose content for consumption by multiple audiences
- › Utilize **Familiar SharePoint Interface**
 - › Provides even casual users with easy, familiar access to content
 - › **Quickly locates items** in the UCM repository without complicated steps typical in building an advanced search
 - › **Eliminates the need to move or duplicate content** to SharePoint
- › **Expands Reach of Content Management** throughout organization
 - › **Increase productivity** of knowledge workers
 - › Expands SharePoint to include robust and feature-rich Oracle repositories
- › **Extends Benefits Inherent in UCM**
 - › Allows IT and Records Management departments to ensure that **proper policies are followed regarding data retention, archiving and long-term storage**

Application Features

- › **Easy to Deploy**
 - › Connector designed to be installed and run in the SharePoint environment, without requiring changes to how existing SharePoint deployments have been implemented
 - › Enable **single sign-on, mapping credentials & security parameters for login** on UCM
 - › Provides **alternative to either Oracle thick client or Web client**
 - › **Annotations and redactions** applied in UCM are exposed
 - › Microsoft Office **Outlook support**
- › **Advanced Search Capabilities**
 - › **Enforces security rules** for accessing information in Oracle UCM
 - › Provides **granular and more reliable query**
 - › Indexed search results vs. standard SharePoint query results
 - › Metadata-based search vs. algorithms and probabilities
 - › Relevant result sets
 - › Increase reliability that **query results will be relevant**
- › **Easily creates new email with image attached** from search results
- › **Supports full-text search fields**

ILINX INTEGRATES CUSTOM ORACLE METADATA FOR ADVANCED SEARCHING OF THE UCM REPOSITORY

ILINX PROVIDES ORACLE UCM SEARCH RESULT SET IN TABULAR FORMAT
