

IMAGESOURCE ANNOUNCES THE RELEASE OF THE ILINX MANUAL INDEXING TOOL

October 1, 2008, Olympia, WA - ImageSource, Inc., a leading provider of content management solutions and professional services, proudly announces the release of the ILINX Manual Indexing Tool.

The new ILINX Manual Indexing tool is a Windows client application that allows users across an organization to successfully perform indexing tasks with validation when contributing to Oracle Enterprise Content Management products.

The tool was developed by the ImageSource product development team in order to eliminate issues that arise from out-of-the-box indexing tools that only perform basic functions like pick lists and basic field type validation. With the ILINX Manual Indexing Tool, more accurate index values make documents easier to locate when searches are performed. The tool also provides the following features to ensure contributors enter optimal indexing data:

- Requires that fields are entered
- Constricts the length of fields
- Provides pick lists with a pre-set number of fields to choose from
- Provides friendly fields with natural labels.

“The goal of the development team was to extend the reach of capture throughout an organization with a simple tool that provides direct, accurate indexing into their IPM imaging system,” said Martin Waldron, Program Manager for Development, ImageSource.

The City of Kennewick, Washington, currently has the new product in full production at the City Clerk’s office for quick, easy contribution of agenda items to their Oracle IPM repository. Kennewick implemented the ILINX Manual Indexing Tool as part of an enterprise solution that began with streamlining their City Council Meeting Agenda process.

Their solution utilizes ILINX technologies, Cardiff LiquidOffice, Oracle IPM and Kofax Ascent Capture. These complementary technologies provide the City with a comprehensive system that provides an enterprise repository for storage, workflows for the routing, review, approval & distribution of City Council agenda documentation, electronic LiquidOffice time cards for payroll, and successful contribution of all content to their Oracle repository with the ILINX Manual Indexing Tool.

“The ILINX Manual Indexing tool provides an efficient, cost-effective way to ensure that data is entered accurately without having to utilize expensive off the shelf capture software,” said Christina Palmer, Assistant Director of Support Services.
